Channel Agnostic Agent

ANSWERS FROM YOUR DOCUMENTS, INSIDE YOUR CHAT APPS

Type: Knowledge-base AI assistant **Works with:** Slack, Microsoft Teams, Google Chat **Built for:** Employees and support teams

About the product

Channel Agnostic Agent lets anyone ask a question in plain language and get an answer drawn only from your approved policies, procedures and documents, with the source file and page shown. It lives inside Slack, Microsoft Teams and Google Chat, so people get answers where they already work.

The challenge we solve

Policies and procedures sit in PDFs and shared folders that few people have time to search. HR, IT and operations teams answer the same questions repeatedly, and answers from memory drift from the documents. Channel Agnostic Agent answers from the source documents and says so when it cannot find something. Channels are connected by configuration, not by rewriting the assistant.

How it works

Step 1
Ask in the chat app. Message the bot or mention it in a channel.

Step 2
The assistant finds the most relevant passages in your indexed documents.

Step 3
It answers only from those passages and cites the file and page.

Step 4
The reply arrives in the same thread, formatted for the platform, with memory of the chat.

Architecture

CHANNELS
Slack
Microsoft Teams
Google Chat
Web UI

›

ADAPTERS
Verify the request
Normalise the message
Format the reply

›

CORE SERVICE (FASTAPI)
1 Route search or chat?
2 Retrieve top passages by similarity
3 Answer grounded, with citations
Memory per conversation thread

›

LLM
Gemini 3.8 Flash

VECTOR STORE
ChromaDB, local

Documents (PDF, Markdown, text) are split into overlapping chunks, embedded locally and stored in the vector store. Channels are added and switched on from the admin page.
